

Extensions Aftercare Advice

Maintaining the hair extensions

Washing

- Shampoo and condition your hair extensions with sulphate free shampoo and conditioner. We recommend the Beauty Work's sulphate free Pearl Nourishing Argan Oil Shampoo for the Invisi Tape hair extensions.
- When conditioning, avoid the root area and let it sit and soak into your hair extensions before rinsing thoroughly to avoid build-up.
- Apply a small amount of argan oil serum to wet or dry hair to lock in moisture and nourish your hair extensions.
- Always use heat protection spray on wet or dry hair before using heated appliances.
- Beauty Works Pearl Nourishing Argan Oil Mask is specifically formulated to nourish and revitalise dry hair. To restore shine and softness, gently comb through wet hair focusing on the mid-lengths and the ends. Apply as often as needed.

Brushing

- The extensions are hand tied and therefore pulling them will damage the weft. Start brushing your hair from the bottom and then move slowly to the top.
- Ensure you are using the Boar Bristle brushes avoid breakage and damage to your own hair.

Things to avoid with your extensions

- Salt water and chlorine water.
- UV rays – avoid strong exposure or wear a sunhat when outside
- Silver shampoos and toners, hair colour.
- Excessive use of heated appliances or heat appliances that reach above 180 degrees. Using above 180 degrees on your hair extensions will cause irreversible damage.
- Sleeping with wet hair. It's also best to braid your hair when sleeping to avoid tangling and the cuticles rubbing together.

Extensions FAQs

How long should my extensions last?

The lifespan of your hair extensions will depend on aftercare. We do not guarantee a definitive lifespan of any types of hair extensions due to them being a natural consumable product.

Light blonde coloured hair extensions will have a shorter life span due to the bleaching process. Therefore, they will also require more care and less heat application to increase the lifespan.

How often should I wash my extensions?

Wash twice a week with Beauty Works aftercare products. Excessive washing and styling will damage the cuticle and decrease the lifespan of your extensions.

Which products are best to use on extensions?

We recommend the Beauty Works product range for your extensions. Particularly the Pearl Nourishing Argan Oil Shampoo, Pearl Nourishing Argan Oil Mask, 10-in-1 Miracle Spray (heat protection and UV protection), Beauty Works Argan Oil Serum.

Can I use heat on my extensions?

Yes you can use tongs, straighteners, and heated rollers as long as the maximum temperature is 180 degrees. We recommend not using them very often though as to avoid breakage and snapping.
